Dental Vocabulary

Visits and Exams

Fluoride Treatment - a prescription strength fluoride product that helps strengthen the tooth surface and prevent cavities.

Sealant Application - a composite material used to seal the decay-prone pits, fissures and grooves of children's teeth to prevent tooth decay.

Space Maintainer - a dental appliance that fills the space of a lost tooth or teeth and prevents other teeth from moving into the space. Used especially in orthodontic and pediatric treatment.

Prophylaxis - the scaling and polishing procedure performed to remove calculus, plaque and stains from teeth.

Restorations and Repairs

Restoration - any material or device used to replace tooth structure lost because of decay or fracture.

Amalgam - an alloy used to restore teeth.

Composite Restoration - a tooth-colored material used to restore teeth.

Endodontics

Endodontics - the dental specialty that deals with injuries to or diseases of the pulp, or nerve, of the tooth.

Pulp Cap - procedure used by which pulp is covered with a dressing or cement.

Pulpotomy - to remove a portion of the tooth's pulp.

Root Canal Therapy - the process of treating disease or inflammation of the pulp or root canal. This involves removing the pulp and tooth's nerves and filling the canal(s) with an appropriate material for a permanent seal.

Anterior - refers to the teeth and tissues toward the front of the mouth.

Molar - the broad, multicusped back teeth used for grinding food.

Bicuspid - a two-cusped tooth found between the molar and the cuspid.

Periodontics

Periodontics - the dental specialty that deals with injuries or diseases of the gums and supporting tissues.

Scaling - a procedure used to remove plaque, calculus and stains from the teeth.

Root Planning - the process of scaling and planning root surfaces to remove all calculus, plaque and infected tissue.

Gingivectomy - the surgical removal of gingival (gum) tissue.

Osseous Surgery - surgery performed to correct damage to gingival (gum) tissue and supporting structures as a result of periodontal disease.

Oral Surgery

Surgical Extractions - extraction of an unerupted tooth by making a surgical incision.

Incision and Drainage of Abscess - making an incision so the trapped liquids in the infected tissue can escape.

Major Restoration

Crowns - the portion of the tooth that is covered by enamel. Also a dental restoration that covers the area of the tooth and restores it to its original shape.

Dentures

Complete Dentures - a dental prosthesis that replaces all the natural teeth of a single dental arch.

Partial Dentures - a dental prosthesis that replaces one or more, but less than all, of the natural teeth and associated structures in an arch.

Fixed Bridges

Retainers - the part of a fixed bridge that attaches a false tooth to a natural tooth or implant.

Pontics - an artificial tooth used in a fixed bridge to replace a missing tooth.
